

U.S. Application No. 10/041,057

August 17, 2005

Proposed New Claim

26. (New) A system for internationalizing files for display on a browser, said system comprising:

means for identifying a file having a first section marked with a first identifier, said means for identifying comprising:

means for monitoring files being sent by a server; and

means for identifying files being sent having an internationalization MIME-type;

means for receiving a language indicator;

means for removing said first identifier from said first marked section prior to displaying said file on the browser if said language indicator is a default language indicator, said means for removing comprising:

means for receiving an input stream based on said file;

means for scanning said input stream for said first identifier; and

means for removing said first identifier from said first marked section in said input stream to generate an output stream for display on the browser; and

means for substituting said first identifier and said first marked section with a first replacement section corresponding to said language indicator prior to displaying said file on the browser if said language indicator is not said default language indicator, said means for substituting comprising:

means for receiving an input stream based on said file;

means for scanning said input stream for said first identifier; and

means for substituting said first identifier and said first marked section in said input stream with said first replacement section to generate an output stream for display on the browser.
